

OVERHEAD CABLE DUCT SYSTEM

This ducting system is designed to accommodate a large number of cables across a suite of S2005 cabinets. The 200mm wide duct sits above the roof panel and provides a “drop in” feature, which allows cable to then enter the cabinet in the correct position.

The rail kit offers the flexibility to mount the duct at any position throughout the depth of the rack. This also provides the ability to add additional ducts for extra width. There are rail kits that suit each depth of cabinet and the duct sections are designed to suit all three widths of cabinets. Both the 700 wide and 800 wide have the “drop in” feature.

Assembly is easy with all required fixing points already on the rack, simply screw in the rails kits and fix on the duct sections.
