SENTINEL POWER BOARDS

The Sentinel Power Boards provide reliable power distribution combined with local and remote power management with environmental monitoring via IP.

Available with either Australian or IEC outlets, these power boards have the ability to view power, temperature and humidity levels via a web browser or receive SNMP based alarms when conditions exceed defined thresholds. User defined outlet control access can be managed by the administrator with the ability to reboot attached appliances in a controlled timed sequence.

Information on total amp draw, humidity and temperature are also displayed directly on the power board, together with warning displays for an out of threshold situation.
