Certificate of Compliance

This document certifies that

MFB Products

Commissioned an Engineering report to certify their manufactured Lifting device conforms to AS4991-2004.

Therefore I can state that the MFP Products Lifting device as described in drawing Part No 03302-01 has been proof tested (completed on machine calibrated in accordance with AS2193 to grade C requirements, lab procedures to comply to AS/ISO/IEC 17025) to:

Working Load Limit (WLL) of 400kg.

This device has been designed for purpose of lifting cabinets onto and off transport, locating cabinets into place. The system has been designed to withstand a minimum of 20,000 lifting cycles.

To keep this compliance current you must: -

Not alter the lifting device to deviate from the system as tested. Any physical alterations to components should not be made without approval from certified engineer. Adhere to MFB Products Safe Use Procedure

Not exceed Maximum Working load limit (WLL).
